

Module 5: Data Analysis & Visualization with Pivot Tables

1. Freezing Panes

Freezing Panes is an Excel feature that keeps selected rows or columns visible while scrolling through a worksheet.

Why do we use it?

To keep important headers or labels visible when working with large datasets.

2. Conditional Formatting

Conditional Formatting automatically changes the appearance of cells based on specified rules or conditions.

Why do we use it?

To quickly identify trends, patterns, duplicates, high or low values, and potential issues in data.

3. Pivot Tables

Introduction to Pivot Tables

A Pivot Table is an Excel tool that summarizes, organizes, and analyzes large amounts of data without changing the original dataset.

Why do we use it?

To quickly generate summaries, reports, and insights from large datasets.

KPIs (Key Performance Indicators)

KPIs are measurable metrics used to evaluate business or organizational performance.

Why do we use them?

To monitor progress toward business goals.

Hierarchies

A Hierarchy organizes related fields into multiple levels.

Why do we use it?

To analyze data at different levels (e.g., Year → Quarter → Month).

Rows

Rows define how data is grouped vertically in a Pivot Table.

Why do we use them?

To categorize and organize records.

Columns

Columns define how data is grouped horizontally in a Pivot Table.

Why do we use them?

To compare categories side by side.

Values

Values contain the calculations or summarized data displayed in a Pivot Table.

Why do we use them?

To calculate totals, averages, counts, and other summaries.

Filters

Filters limit the displayed data based on selected criteria.

Why do we use them?

To focus on specific subsets of data.

Drill Down

Drill Down displays the detailed records behind a summarized Pivot Table value.

Why do we use it?

To investigate the source of summarized results.

Slicers

Slicers are interactive buttons used to filter Pivot Tables and charts.

Why do we use them?

To make reports interactive and easier to filter.

Timelines

Timelines are interactive date filters designed specifically for date fields.

Why do we use them?

To analyze data across different time periods.

Grouping by Date or Category

Grouping combines similar values into categories within a Pivot Table.

Why do we use it?

To simplify analysis by organizing related data.

Value Field Settings

Value Field Settings determine how values are summarized in a Pivot Table.

Why do we use them?

To display data as Sum, Count, Average, Minimum, Maximum, and other calculations.

Calculated Fields

Calculated Fields create new calculations using existing Pivot Table fields.

Why do we use them?

To perform custom calculations without modifying the original dataset.

Calculated Items

Calculated Items create calculations using items within the same Pivot Table field.

Why do we use them?

To compare or combine category values inside the Pivot Table.

Dashboard-like Pivot Reports

Dashboard-like Pivot Reports combine Pivot Tables, charts, slicers, and KPIs into one interactive report.

Why do we use them?

To monitor business performance and support decision-making.

4. Introduction to Visuals

Column Chart

A Column Chart displays data using vertical bars.

Why do we use it?

To compare values across categories.

Line Chart

A Line Chart displays trends using connected data points.

Why do we use it?

To analyze changes over time.

Pie Chart

A Pie Chart represents data as portions of a whole.

Why do we use it?

To show percentage distribution.

Bar Chart

A Bar Chart displays data using horizontal bars.

Why do we use it?

To compare multiple categories, especially those with long labels.

Area Chart

An Area Chart displays trends while emphasizing the magnitude of values.

Why do we use it?

To visualize cumulative changes over time.

Combo Chart

A Combo Chart combines two chart types into a single visualization.

Why do we use it?

To compare different measures within one chart.

Histogram

A Histogram shows the distribution of numerical data using intervals (bins).

Why do we use it?

To understand the frequency distribution of data.

Box & Whisker Chart

A Box & Whisker Chart summarizes data distribution using quartiles and outliers.

Why do we use it?

To identify spread, variability, and unusual values.

Treemap

A Treemap displays hierarchical data using nested rectangles.

Why do we use it?

To compare proportions within categories.

Waterfall Chart

A Waterfall Chart shows how positive and negative values contribute to a final result.

Why do we use it?

To visualize changes in financial or business performance.

Funnel Chart

A Funnel Chart displays values across different stages of a process.

Why do we use it?

To analyze conversion or progression through sequential stages.

Dynamic Charts

Dynamic Charts automatically update based on user selections or changing data.

Why do we use them?

To create interactive and flexible reports.

Formatting Charts

Formatting Charts involves customizing chart elements such as axes, labels, colors, titles, and data points.

Why do we use it?

To improve readability and presentation.

Sparklines

Sparklines are small charts displayed inside individual worksheet cells.

Why do we use them?

To show quick trends without using a full-sized chart.

KPI Visuals

KPI Visuals display key performance indicators using graphical elements.

Why do we use them?

To monitor business performance at a glance.

Target vs Achievement

Target vs Achievement visuals compare actual performance against planned goals.

Why do we use them?

To evaluate whether objectives have been achieved.

5. Dashboard Design Principles

Dashboard Design Principles are guidelines for organizing and presenting information effectively.

Why do we use them?

To create dashboards that are clear, visually appealing, and easy to understand.

6. KPI Indicators

KPI Indicators visually represent business performance using predefined metrics.

Why do we use them?

To monitor important business objectives.

Progress Bars

Progress Bars visually show the percentage of task or goal completion.

Why do we use them?

To track progress toward a target.

Traffic Lights

Traffic Lights use colors (Red, Yellow, Green) to indicate performance status.

Why do we use them?

To quickly identify whether performance is good, average, or poor.

7. Interactivity with Form Controls

Dropdown

A Dropdown is a selectable list of predefined options.

Why do we use it?

To allow users to interact with reports by selecting different options.

Checkboxes

Checkboxes are controls that allow users to select or deselect options.

Why do we use them?

To enable interactive filtering or control report behavior.
